

Dig Season is almost here!

Risk Management is for EVERYONE!

Having your utility locates on hand and understanding what they are telling you is the first step in reducing your risk of causing a damage. The following list are some questions to consider in dealing with utility locates. **Did you know that most utilities provide you with an approximate location of their underground facilities? Did you also know that depth approximation is known yet not provided? Did you know hand digging to expose a utility to its full depth is not as practical as one may be led to believe?**

How do you assess RISK on your project?

URclaims can help you reduce your risk of damaging a utility. Attending a **4-hour course** will give you the tools you will need to reduce your risk and keep money in your pocket.
